

SPARK

Pay once. Unlock credit.

Collateralized credit on Creditcoin, gated by Attestcoin Protocol payment proofs.

DeFi · BUIDL CTC 2026 Fall · Creditcoin & Credit Labs

PROBLEM

Credit cannot trust a payment that happened somewhere else

Without paperwork, delays, or a middleman, most credit systems cannot verify that a deposit or repayment occurred on another chain.

- Manual reconciliation is slow and opaque
- Centralized oracles and bridges add trust risk
- Cross-chain DeFi needs cryptographic proof, not receipts

SOLUTION

Verify payment. Then open credit on Creditcoin.

Spark uses the Attestcoin Protocol (formerly USC) so a Sepolia payment can unlock or clear a credit line on Creditcoin without a centralized oracle.

- Deposit on Sepolia → Attestcoin proves the tx → credit opens
- Repay the same way → line closes
- No valid proof means no state change

HOW IT WORKS

Four steps. Fully on-chain.

01

Pay deposit on
Sepolia

02

Attestcoin proves
the payment

03

CreditLine opens on
Creditcoin

04

Repay → credit
closes

Live testnet: Sepolia + Creditcoin CC3

ATTESTCOIN PROTOCOL

Payment verification is required, not optional

- `openCredit` and `repayCredit` call the verifier
- One-time `txHash` (replay protected)
- Payer must match `msg.sender`
- Amounts come from the verified claim

Component	Role
SepoliaPayment	Payment events
Attestcoin / USC	Cross-chain proof
CreditLine	Credit on Creditcoin
BlockProver 0xFD2	On-chain verify

PRODUCT

Live testnet product, not a slideware demo

- App: spark-defi.vercel.app
- Repo: github.com/thesithunyein/spark
- Help, Overview, Pay, Repay, Payments, Settings
- Contracts deployed on Sepolia + Creditcoin testnet
- Testnet only. Not audited.

ROADMAP & ASK

Grow Spark on Creditcoin

- **Now:** Live Attestcoin USC proofs on Creditcoin testnet
- **Next:** Faster attestation UX and deeper receipt decoding
- **Later:** Mainnet readiness, audit, simpler UX

Seeking Grand Prize / CEIP fast-track to deepen Attestcoin integration and ship credit that Creditcoin can power for the real world.
